USING OUR EXPERIENCE, WE OFFER ACCURATE BUSINESS MANAGEMENT

Considered a leader in the field of business automation “AcTrade Soft” was founded in 2009. The main activity of the company is the provision of services and complex automation of enterprises. Here you can find the ideal combination of competitive price and advanced technology.

As an official partner of 1C, “AcTrade Soft” considers the introduction and maintenance of 1C programs to be its main activities. The company's team is made up of managers, highly qualified programmers, investment and service professionals who have professional certifications in various fields of 1C.

The key to “AcTrade Soft” success is a high level of customer service and a caring attitude to each customer We offer our customers:

- **Large range of high quality innovative technologies,**
- **Accurate software solutions at any time,**
- **Individual approach to customers.**

In 2010, the field of automation of trade was further developed and expanded, along with the expansion of the activities of “AcTrade Soft” both in the territory of the Republic of Armenia and abroad. The company started offering specialized equipment, network design, maintenance, etc.

WHAT DOES BUSINESS AUTOMATION MEAN?

Today, it is difficult to imagine a company that can operate without computer equipment. In order to ensure the growth and development of the company, to plan, control and manage the work, as well as to achieve quality and reliability, of course, the business must be automated. Business automation allows you to reduce costs significantly, optimize business processes. It is known that in the absence of automation, one of the negative aspects of work is the tendency of employees to steal goods and dishonest work, which leads to financial loss and bankruptcy., which leads to financial loss and bankruptcy. Thus, enterprise management automation allows management to monitor the work of employees, to reduce errors that often occur as a result of the human factor. At the same time, it provides an opportunity to combine the work of different departments and make the company's activities more efficient.

Summarizing the above mentioned, the following advantages of automation can be distinguished:

- Reduction of problem solving time,
- Reduction of labor costs,
- Reduction of inaccuracies in processed information,
- Improving production processes,
- Increasing the efficiency of customer communication,
- Operational financial reporting and analysis, etc.

Not only the executor but also the client's active participation in the design of any information system is expected. As a result of many years of experience in developing and implementing programs, it is possible to create software solutions during the development of IT solutions, about which the customer often does not even assume.

- The process of automation of the organization is impossible without the direct participation of the head of the organization and employees.
- Even in the presence of a ready-made program, it takes some time to test and make the necessary changes.

Employees of your company at least want to burden themselves with extra work, and in the first phase of data collection, project investment and staff training increase workload. Therefore, at the initial stage, it is not possible to objectively assess the capabilities of the program

During the investment phase, as a result of hard work, some may even want to give up the project and return to the traditional "paper and pen" option, but you should not be disappointed, you just need to be a little patient and see the incredible results of automated work. In order not to burden yourself with the above problems, you can find a provider that offers ready-made solutions, but in that case, your company must work as planned, changing the strategy of the company.

Our specialists have huge experience in the complex implementation of 1C software products in such areas of accounting automation as:

- Website design, preparation and integration for 1C program,
- Wholesale automation,
- Retail sale automation / store and network supermarket automation,
- Storage automation with special equipment,
- Automation of personnel and accounting reports, Accounting automation,
- Management system accounting automation / pharmacy, pawnshop, cafe-restaurant,
- Mobile sales system with the help of pocket computers, etc,
- Automation of production processes,
- Information exchange between information systems, etc.

1C IS A FLEXIBLE AND POWERFUL REPORTING SYSTEM THAT WILL REFLECT ALL THE NUANCES OF YOUR COMPANY

Over the years “AcTrade Soft” has developed tools for managing reports.

The specialized team of "AcTrade Soft" has developed and introduced "1C" software products, offering typical and individual software solutions of any complexity.

“AcTrade Soft” has implemented hundreds of complex programs, constantly creating new software products for the convenience of business management.

The company takes a complex approach to solving customer's problems, from initial consultation to support for embedded solutions.

Developing an investment strategy, implementing work, integrating the system, and further servicing with one team allows you significantly reduce project implementation costs and ensure quality assurance management.

The company offers its customers not only standard products with standard features, but also some solutions for the effective management of the customer's business and work.

“AcTrade Soft” provides complex services to automate financial and economic activities. Taking into account the needs of many companies, “AcTrade Soft” has developed several products that automate specific areas of the enterprise.

- Design and integration of websites with 1C program
- "AcTrade Trade" (accounting of trade and warehouse)
- "AcTrade Salary" (salary and staff accounting)
- "AcTrade Production" (automation of production)
- "AcTrade Pharmacy" (pharmacy Business Automation)
- "AcTrade Restaurant" (accounting for catering business)
- "AcTrade Pledge" (pawnshop automation)
- "AcTrade Mobile Sales" (wholesale / retail automation with pocket computers (CPC), data collection terminals (DCT), smartphones and similar mobile devices).

Due to “AcTrade Soft” software product versatility and the qualification of specialists "AcTrade Soft" can freely enter a wide market, automate any sphere of different activities of enterprises.

PHARMACY PROGRAM AUTOMATION

The main functional capabilities of the program

- Medication accounting, warehouse accounting,
- Relationships with suppliers,
- Pricing system,
- Retail trade through commercial equipment,
- Preservation of cash register receipts, sale history,
- Implementation of analytical reports,
- Ability to automate networking of enterprises.

Pharmacy automation gives the following advantages:

- Effective operative management of pharmacy products and warehouse products,
- Fast and high quality service organization,
- Opportunity to use motivational systems for pharmacy customers (discount system, gift cards, etc.), evaluation of the effectiveness of marketing companies,
- Possibility to use a special payment system for employees,
- Effective control of counter-agents, more efficient and fast solution of accounting and tax accounting problems.

MOBILE SALES

Sales Works automation system allows

- Automate pre-selling of goods supply applications,
- Automate the sale of goods from mobile warehouses (van-selling),
- Automate merchandising information, log data and picture reports,
- To have the history of transactions with the given customer and the number of planned transactions,
- Save the optimal number of orders with pocket PCs, and send it to the enterprise accounting system via GPRS channel.
- Manage sales agents through GPS system
- Enter information 1C without major configuration changes, etc.

The main advantages of mobile sales.

- Operation, real-time operation, reduction of the number of visits to the central office,
- Increasing the personal responsibility of sales representatives and merchandisers, operative control of the latter's work, reducing mistakes, increasing productivity,
- Possibility to use inexpensive pocket PCs,
- Reduction of paper circulation,
- Optimization of storage balances of distribution companies,
- Increasing the image of the distribution company in the eyes of customers.

TRADING AUTOMATION

- Optimization of the internal process of the enterprise,
- High and strict control over the sales process,
- Detailed analysis of the work done by each employee,
- Provision and control of discount, accumulative, bonus systems,
- Fast reporting, individual report development,
- Profitability analysis for the whole enterprise, as well as for each product,
- Distribution of additional costs on the prices of purchased goods,
- Product cost formation and analysis,
- Fast and accurate accounting of stored goods, simplification of inventory process, exclusion of losses,
- Supervision and analysis of calculations with suppliers,
- Salary accounting and payment.

AUTOMATION OF RESTAURANTS, CAFES AND BARS

Taking into account the peculiarities of the restaurant activity, "AcTrade Restaurant" program allows:

- Increase staff speed through clear management. The system pre-fixes the scheme of work, gives him the appropriate positions and entry permits, after which each employee can perform only the actions he needs.
- Insure against miscalculations. The system automatically calculates the bill, taking into account the discount or surcharge, the amount of service, taking into account the different price lists, as well as the coin.

- **Reduce the cost of training new staff.** The system has a very simple and clear, color sensor interface, which is quite easy to master and can be used even by an employee who does not know the computer.
- **Reduce employee contact time and avoid staff misunderstandings.** The menu included in the system contains the full and abbreviated names of the dishes that the waiters see on the computer screen and use when communicating. Orders submitted to cooks are printed on printers, and important messages to employees are displayed on the terminal screen.

The program provides the following advantages:

- **Maintenance of raw materials, purchased goods and storage of finished products.** Entry of goods, internal movement, inventory and write-off,
- **Formulation of balance and product movement reports,**
- **Costing,**
- **Product registration and its further sale to retail and wholesale buyers,**
- **Discount sale,**
- **Registration of reserved goods,**
- **Control of minimum reserve balances,**
- **Accounting and cash register operations and their accounting,**
- **Simultaneous documentation of several companies,**
- **Making calculations with suppliers and buyers,**
- **Reporting with accountants,**
- **Expenditure accounting,**
- **Formation of the company's income during the period.**

PRODUCTION AUTOMATION

We offer to solve the following problems through the introduction of "AcTrade Production" software product:

- Provide the owners of the enterprise with the necessary information
- Build a common information system for the enterprise
- Introduce a modern planning system.
- Sales planning,
- Production planning,
- Procurement planning,
- Introduce a budgeting system
- Reduce labor costs on accounting and tax reports

1C “The Production + Services + Accounting” program is a typical example for small and medium-sized enterprises, the main type of activity of which is the issuance of products, the provision of services, as well as wholesale as a parallel activity.

Production is one of the most difficult processes in an enterprise. Production management is closely related to the management of procurement, sales, fixed assets, personnel and finance.

The configuration allows you to fully manage the production process, from the raw material entry to the factory, until the release of the finished product. Production in the 1C program

- The standard cost of introducing a unit of production and the calculation of the planned cost of production,
- Product costs include material costs, recyclable waste, semi-finished products, processes, services of other companies, as well as other indirect costs.
- Unlimited quantity of one product,
- Production planning and control
- Determining the required amount of raw materials and supplies based on the
- production standard of the product,
- Automatic cost calculation according to monthly output,
- Comparison of actual and planned cost,
- Production cost accounting by product and cost type,
- Automatic calculation of unfinished production balances (with the possibility of manual corrections),

- Registration of finished product release based on standard costs
- Allocation of individual and transaction salaries,
- Accounting for performed work and provided services.

OPERATIVE ACCOUNTING

Operational accounting is performed in detail and automated accounting procedures. One of the most important factors in the competitive struggle is cost control to reduce costs. The existence of a management accounting system, reflecting the real production cost, allows the enterprise to take effective measures, reduce production costs and product cost, increase profitability.

Calculations with counterparties

- Registration of finished products and sales of goods,
- Accounting in the context of contracts, as well as accounting for individual supplies and payments,
- Booking of warehouse goods in case of orders,
- Establishment of requirements based on customer orders and control of the production process.
- Carrying out calculations.

INSTALLATION OF BIOMETRIC TERMINALS

**TRACK STAFF
ATTENDANCE**

**CONTROL
WORKING HOURS**

**SALARY SALCULATION
ACCORDING TO THE
HOURLY ACHEDULE**

**EXPORT DAILY AND
MONTHLY REPORTS: ACCORDING TO
EMPLOYEE ATTENDANCE**

**APPLY TO 'AcTrade', SAVE
MONEY, TIME AND NERVES.**

WAREHOUSE ACCOUNTING

- Accounting for inventory and product movement, raw materials and goods,
- Batch costing of raw materials and commodity prices, write-off of goods in <<LIFO>>, <<FIFO>>, "average price" methods,
- Registration of leftovers of imported goods in the context of registration of customs declarations.

Thus, the “AcTrade” team will help you to automate your current or new opened business you in any field.

PHARMACIES WORKSHOPS, BIG AND SMALL OFFICES INVENTORY

• INVENTORY PREPARATION

Project implementation and training

Product matching: numbering/barcode

• PREPARATION OF ACCOUNTING DOCUMENTS

Actual accounting

Scanning terminal

- Receipt of balance after software and actual calculation
- Comparison of surplus and deficit- software and the actual final correction

PROVIDED SERVICES AND IMPLEMENTED PROJECTS

PROGRAM FOR PHARMACY, BIOMETRIC TERMINALS AND SPA CENTER

We implement pharmacy, spa center, beauty salon and staff attendance control programs.

Pharmacy management system

The system allows to control and manage the processes taking place in the pharmacy , to receive reports on working capital. The program allows you to control the pharmacy balances, manage the document flow, provide all the necessary sales analysis.

One of our pharmacy partners is "Armen Pharm", "PHARM TRUST" Co.Ltd , "ARTEMID PHARMACY" LLC with which we provide 1C program-based commercial software through visits and telecommunications, which includes:

- *1C training*
- *Typical update*
- *Discussion of issues*
- *Improving the sales process*
- *Timeline control*
- *Accurate composition of the defect*
- *Analytical analysis*
- *Monitors the inventory process*

Retail Automation Program

We do the following:

- Implementation of a retail trade automation program.
 - Training
 - Software maintenance and development of automation solutions.
- ✓ ***Implementation of a retail trade automation program***
- Introducing the 1C program
 - Introducing the customer's field of activity
 - Clarification of specifics related to the field
 - Obtaining a technical task
 - Discussion of requirements based on the technical task
 - Program implementation
- ✓ ***Training***
- At this stage, in parallel with the implementation of the program, our skilled specialists provide training for administrative use, as well as in separate sub-sections. At the end of the training phase, the client fully masters the software tools and is able to independently manage the entire document flow.
- ✓ ***Software maintenance and development of automation solutions***
- Get a software consultation (remotely) or through a specialist visit
 - Follow up on the smooth running of the program
 - Database preventive examination, diagnostics
 - Software solutions update
 - Development of new printing forms, creation of reports
 - Audit of imported data (verification)
 - Making reports
 - Equipment connection and adjustment

"TRIONIX" LLC

"Trionix" LLC represents "Swarovski" and "Egoiste" stores in Armenia.

Technology: 1C: Trade management 8.3

Based on the received technical task, the following works were performed:

- Project implementation and adjustment phase
- Training phase (parallel to the implementation phase)
- Complete data transfer 1C 10.2 - 1C Trade management 8.3 11.4
- Restriction of users' software capabilities
- Connection and adjustment of all available equipment (scanner, data collection device, etc.)
- Integration with cash registers
- Accumulative system
- Discount system
- Working with software, troubleshooting
- Settlement of reports
- Development of software tools for fast and operative work

Contact information:

Gayane Panosyan (Authorized person by the Director)
